

# WE SAFELY HANDLE AND STORE YOUR PRODUCTS

COMI is a trusted partner for industries and companies that aim to easily, quickly and safely transport, store and organise materials, finished products and production waste.

The company was founded in 2022, inspired by the desire to cater to a rapidly expanding market, offering products that could easily be customised to client needs.

COMI, an apparently new company, is in fact a direct descendant of Fami, from which it draws much of its expertise. This translates into research and development processes aimed at the continuous study of innovative materials and products as well as production methods leading to increasingly functional and long-lasting storage solutions.

The broad range of storage solutions is highly diversified and divided into several families. On the one hand, we find traditional metal and wire mesh containers, tippable buckets and spill pallets, and on the other, pallets with and without free uprights for material handling, in addition to cabinets for the safe storage of hazardous or polluting substances.

The quality of the products is the direct result of the encounter between high-quality raw materials and industrialised, automated and cutting-edge production methods. The aim is to create resilient and durable containers that guarantee a high storage capacity, which are also tools that help protect people and the environment.

# PRODUCT CUSTOMISATION AND FLEXIBILITY THANKS TO AUTOMATION

## QUALITY CONTROL

Product quality underpins the entire COMI production process. From the choice of metal for a certain product, to the careful inspection of both the raw material and finished product, every single item must satisfy specific requirements in accordance with the ISO 9001 standard. In addition to quality control, every single COMI product undergoes destructive testing to ensure the production of safe, resistant, long-lasting containers, buckets and spill pallets.

## CUSTOM DESIGN

For COMI, every single project is unique, just like client needs and requirements. COMI offers a personalised consulting and planning service with the aim of being identified as a reliable, expert partner capable of providing solutions that make everyday work simpler, faster, and more efficient. Consultants and technicians are constantly up to date thanks to ongoing training, allowing them to propose ever-more technological storage solutions and cutting-edge production techniques.

# PRODUCTION

The COMI production process is designed and implemented around the principle of automation to guarantee higher production, quality and precision of the various processes. A high degree of flexibility is thus achieved, allowing the production of both standard products and custom solutions according to client requirements.

## INDUSTRIALISED PROCESSES

The automated production process allows a single sheet of metal to be transformed into a high-quality finished product. Use of state-of-the-art technology such as lasers, bending, folding, profiles and robotic welding cells optimises and speeds up production, while at the same time enabling the offer of standardised products, but also custom items in any shape or size, samples and small batches. COMI's flexible production processes and custom solutions are also possible thanks to a team of highly skilled and specialised operators and an in-house machine shop, where various welding equipment and jigs are developed ad hoc for each project.

## PAINTING

Painting is an essential step in COMI production since it improves the overall look of the product, but most importantly, protects the metal surface to prevent corrosion and the formation of rust. All semi-finished products undergo an initial phosphodegreasing treatment to clean and improve the adhesion of the paint to the metal, with degreasing and subsequent phosphating before being effectively painted using either dip or powder coating systems.

# CERTIFICATIONS

Certifications, workplace safety, environmental and social responsibility are highly topical and important issues for the quality of life today and in the future. At a global level, governments are promoting projects and programs to improve the environmental situation. Through its corporate policy, Comi is committed to implementing actions and practices that, albeit modestly, can influence the impact of production activity on the surrounding area and the environment.

ISO 14001 identifies a technical standard of the International Organisation for Standardisation (ISO) on environmental management systems (EMS) that establishes the requirements for an environmental management system of any organisation.

Management systems for health and safety at work.

The standard defines the extended quality requirements for fusion welding of metal materials both in the workshop and on the construction site.

IT IS an internationally recognised standard for creating, implementing and managing a Quality Management System for any company. It is designed to be used by organisations of any size or sector, as well as by any company.

# METAL CONTAINERS

The metal containers are made of solid, machined and shaped sheet metal, making the box structure stable, sturdy, and resistant to various loads. This type of container can have either four smooth walls or else a front hatch in smooth metal or wire mesh, to facilitate the picking and deposit of materials. The bottom part can have either boxed or sled feet, allowing not only safe stacking of the containers but also safe handling whether empty or full, using pallet jacks or forklifts.

# METAL OPEN-FRONTED CONTAINERS

Metal open-fronted containers are ideal for the orderly and organised storage of work materials, waste and finished products. The bottom and three side walls are shaped with ribbing to strengthen the structure, while the fourth wall features a slanted opening for the rapid and simple passage of material, even with the containers stacked one on top of the other. The base can have boxed or sled feet.

# WIRE MESH CONTAINERS

Wire mesh containers are characterised by a solid supporting structure in sheet metal, and feature a ribbed bottom and wire mesh walls to make it easier to identify the stored material. They are available with openable hatch on the long side and can be fitted with boxed or sled feet. They are ideal for storing medium-heavy materials such as semi-finished or finished products, are easy to handle with pallet jacks or forklifts, and can be stacked to optimise warehouse space.

# COLLAPSIBLE CONTAINERS

---

Collapsible containers are ideal for storing and transporting goods, ensuring maximum practicality and space optimisation thanks to their minimal size both when open and closed. Equipped with a mesh structure for an immediate view of the contents, each container has a door on the long side that allows you to access and remove goods easily and to speed up and make picking operations increasingly efficient. Furthermore, it can also be moved: the slots in the lower part are made specifically for inserting the forks of pallet trucks and forklifts.

Once collapsed, the container takes up a third of its height when open, thus allowing space optimisation during all the phases of storage and transport.

# PALLETS WITH & WITHOUT FREE UPRIGHTS

Pallets with and without free uprights are valid alternatives to traditional wooden pallets for transporting heavy loads such as materials, products, boxes and bulky items. They guarantee durability, good resistance to heavy weights, and comply with current fire regulations. The pallets with free uprights have four uprights and a smooth bottom. The pallets without uprights on the other hand are available with ribbed bottom, open bottom with cross-pieces, or smooth bottom with solid ribbed side walls. Depending on the selected model, the bottom part can be fitted with boxed or sled feet.

# METAL PICKING BINS

The picking bins, available in two versions, are ideal for handling and storing small metal parts and fasteners. They have can four closed sides or be open-fronted, with special ribbing on the walls and bottom to improve their stability and sturdiness. The shaped edges allow the various containers to be safely stacked, while handling is facilitated by the handles with 90° block in the case of closed-wall containers, or by means of cross-pieces or sled feet in the case of open-fronted containers.

# TIPPABLE BUCKETS

Tippable buckets are ideal for the quick, orderly and safe handling of a vast range of materials such as waste, scrap and production waste in the workplace. Emptying operations are facilitated by the bucket tipping mechanism, which can be activated by the operator without getting off the forklift. The bucket can be moved manually or using a forklift or pallet jack thanks to the presence of forkable supports in the bottom part of the container.

HYDRAULIC DAMPER FOR BUCKETS  
ART. 000050

**1 PC FOR TIPPABLE BUCKETS 300-500 LITRES**  
**2 PCS. FOR TIPPABLE BUCKETS 750-1000-1350-1600-2000 LITRES**

All our tippable buckets are prepared for the installation of the hydraulic damper that makes it possible to tip the bucket. We recommend equipping buckets with a capacity greater than 500 litres with two hydraulic pistons to ensure an even safer and more controlled tipping.

The hydraulic damper can be purchased at the time of ordering or later.

The forkable supports in the bottom part allow bucket handling with a forklift.

Once positioned over the container to collect the waste, the operator simply needs to pull a side lever to tip the bucket and facilitate the spillage of the material inside.

# TIPPABLE BUCKETS FOR ROTARY FORKS

These particular tippable buckets are specifically designed for forklifts with rotary forks. They offer a high containment capacity for collecting, sorting and transporting industrial waste, facilitating separate collection operations and increasing the level of cleanliness of the workplace. Unlike traditional tippable buckets, emptying occurs by turning the container upside down over a specific container, instead of by tipping the containment tank.

LOAD CAPACITY FROM  
1000 TO 1200 LITRES

FORKABLE

TIPPABLE

*Example of stacking buckets*

The emptying process is simple and quick: once the bucket is positioned above the waste collection container, simply rotate the forks of the forklift to turn it upside down and facilitate emptying the material.

# METAL BOTTOM-OPENING CONTAINERS

Metal bottom-opening containers allow simple and fast handling of all company waste and can be handled using pallet jacks and forklifts thanks to the sled profiles in the bottom and top part of the container. The special feature of these containers is the double-flap opening bottom allowing fast and immediate emptying of the contents. This operation can be carried out in complete safety directly from the forklift thanks to the practical side opening lever.

When lifted by forklift using the four handles welded onto the top edge, the contents can be unloaded through the roller bottom opening (87% opening). Opening is easy and safe thanks to the lever on the 800 mm side, while closure is facilitated by a special device consisting of levers and steel rollers.

Made of sturdy sheet metal, this container is designed to ensure a rapid and safe disposal of materials. Thanks to the bottom opening, it can be emptied quickly and completely, significantly increasing operational efficiency. This feature makes it perfect for industrial environments where speed and safety in waste disposal are crucial. The container can be moved with both pallet trucks and forklifts, offering great flexibility in transport operations.

# ADJUSTABLE BIG BAG RACK

Big bag racks are designed to support large sacks and big bags. They allow the transport and storage of large quantities of different types of substances and have a metal frame with forkable supports. The racks are available in either a welded or demountable version and can hold different sized big bags thanks to the adjustable legs. The stackable supports allow best use of the available vertical space, thus helping to improve and optimise space management. The upper part of the frame is prepared for the installation of a lid with hydraulic cylinders, ideal for protecting the big bag from dirt, dust and other elements that could compromise the quality of the stored material.

## ADJUSTABLE BIG BAG RACK

Protective container for internal housing of "Big Bag" type flex bags. Square shape. Built in anti-corrosion galvanised steel for permanent exposure to atmospheric agents, external painting with oven-dried powders (Accessory on request). Internal attachments for securing the straps of the bags. Hinged upper lid with self-locking 45° and 90° anti-accidental closing safety rod (non-standard alternatives: removable lid without safety rods or double flap opening). Lever closure with pressure snap. Grip handle. The containers can be used individually or in series (aligned or opposed), with or without structure. Front adhesive label identifying the waste on the container body.

# SPILL CONTAINMENT FLOORING

The spill containment flooring allows dedicating large company spaces to the safe storage of polluting liquids. Ideal for storing drums, tanks and containers, they facilitate daily tapping, decanting and transport operations and ensure the collection of accidental spills. Installing specific ramps facilitates rapid access to the flooring even when using forklifts or pallet trucks to handle drums and containers.

# SPILL PALLETS AND TRAYS

Spill pallets are ideal for collecting flammable liquids (categories GHS 1 - 3) and water-polluting liquids (categories GHS 1 - 4). They can be handled with a forklift or manually thanks to the wheel and handles kit, and can be supplied with a grille or galvanised slats on which to place drums or tanks. The spill pallets are available in a tapered or rectangular version: the latter is compatible with the coupling kit allowing multiple pallets to be connected to create a modular liquid collection system. Use of these spill containment and prevention solutions ensures compliance with several environmental protection and workplace health and safety laws (Law Decree No. 152/2006 and Law Decree No. 81/2008).

## SPILL PALLETS WITH ROOF

Spill pallets with a roof are essential when you do not have a closed warehouse available. A practical solution for covering IBC tanks or drums for outdoor storage, a perfect compromise between safety and ease of use during tapping or handling operations.

The galvanised steel roofs have a removable structure for easy transport and storage. The removable galvanised grille can be opened to offer the possibility of inspecting the tank or cleaning it without having to remove the IBC tanks or drums.

# DRUM RACKS

Steel drum racks are a valid solution for the orderly, safe and stable storage of drums of different sizes and volumes. These products offer numerous benefits: horizontal drum storage facilitates pouring and tapping, while the stackable version allows best use of space. For greater environmental protection, the racks can be positioned on spill pallets to provide a liquid collection solution in case of drum spillage or ruptures.

# POLYETHYLENE SPILL PALLETS AND CONTAINERS

Polyethylene spill pallets are suitable for containing acids, alkaline solutions and fluids compatible with polyethylene (categories GHS 1 – 4). The large one-piece container is covered by a removable polypropylene grille for storing drums and tanks, and can be handled when empty with a pallet jack and forklift. The polyethylene spill pallet is made in compliance with and pursuant to European and Italian directives on environment, water, and workplace health and safety protection (European Directive 204/108/EC, Law Decree 152/2006, Presidential Decree 915/1982 and Ministerial Decree 161/2002).

## POLYETHYLENE SPILL PALLETS

Polyethylene funnel for easy and safe filling of standard 200-litre drums, also as a support surface for filters and cans.

Suitable for aggressive liquids.

Sturdy, high-quality and long-lasting structure, made of chemical- and UV-resistant polyethylene, fully recyclable.

Hinged lid for protection from rain and dirt.

Lock bracket (padlock not included in the supply). Integrated stainless steel mesh.

### FUNNEL FOR DRUMS WITH LID

## POLYETHYLENE SPILL PALLETS

Made of high-quality polyethylene (PE)

- High resistance to chemicals
- The spill pallet can be placed directly on the ground
- With integrated forklift pockets – Can be forked on four sides (except spill pallet for 2 pallets 120 x 80 lengthwise)
- Optimally suitable for Euro pallets (120 x 80) and industrial pallets (120 x 120) and plastic pallets of equivalent dimensions
- The full pallets can be placed directly on the spill pallet using a trolley or forklift
- A steel or PE grille is not necessary, but can be used optionally

## POLYETHYLENE SPILL PALLETS

The containers are made of high-density polyethylene with deep moulding and reinforcement ribs.

The internal walls and the bottom are smooth for easy cleaning.

Non-toxic for food use. High resistance to impact, stacking, thermal changes, ultraviolet rays. Easy to handle with a forklift or pallet truck, even when stacked and closed with a lid. Dimensional and weight stability. Ideal for liquids, also resistant to diluted and concentrated acid and alkaline solutions.

Particularly suitable for cold storage due to their resistance to cold and their high load capacity.

The containers can be equipped with polyurethane wheels and a plastic lid and crosspieces for tipping.

with applied wheels

## POLYETHYLENE SPILL PALLETS

The flexible vinyl fabric spill pallet is a cost-effective, flexible and portable solution for controlling accidental spills from tanks, cisterns, drums, pipes or machinery. Easy to install, it allows quick commissioning and, once folded, takes up little space. Vinyl fabric has a 20% higher durability than other materials and enjoys high abrasion resistance. High-strength seams ensure the safe containment of large quantities of liquids. Colour on request.

# SHELVING

The shelving units for drums and small drums have a dual function: on the one hand, they allow the organised and safe storage of containers, while on the other hand, they facilitate the decanting and pouring of oils, paints, detergents and other chemicals. The small drums are stored by placing them directly on the crosspieces so as to leave the tap free of obstructions and facilitate access. The drums, on the other hand, can be positioned vertically, by means of pallets, or horizontally, by placing them on the appropriate supports.

At the base of each shelf there is one or more spill pallets for the collection of any leaks or spills.

# STORAGE CABINETS

The storage cabinets ensure the orderly and safe storage of drums and containers and are equipped with containment solutions in the event of spillage or leaks. They are available both in the traditional version of cabinet with hinged doors, and in more particular models such as cabinets installed on tanks or cabinets with walls with rock wool and fire resistance. For the organisation of PPE and fire-fighting materials on the other hand, slotted-door cabinets are available, inclusive of a safe crash insert which is easy to break in case of an emergency.

## ACCESSORIES

ON REQUEST

STORAGE CABINETS

The cabinet is equipped with a patented automatic shelf tilting system which, in the event of a fire, slides the stored batteries into the tank installed at the base of the cabinet. Inside the tank, the batteries will be immersed in water which immediately extinguishes the fire and also excludes the possibility of new self-combustion.

CABINET FOR LITHIUM BATTERY STORAGE

ART.	dimensions mm			RAL

# CYLINDER RACK

Cylinder storage depots are solid galvanised steel frames for the management and safe storage of compressed gas cylinders. They feature an anti-intrusion grille and a cylinder lock door with key to ensure access to the contents only to authorised personnel. These depots allow the stable storage of the various cylinders so as to avoid shocks and falls with possible spillage of polluting material that is harmful to the environment and workers.

# INTERVENTION IN THE EVENT OF A SPILL

1

## ASSESS THE RISK

Evacuate non-essential personnel.  
Estimate the extent of the spill and, if possible, identify the spilled material.

ALWAYS PUT SAFETY FIRST!

2

## SELECT PPE

Choose the right protective clothing and equipment that can safely respond to a spill.

IF THE MATERIAL IS UNKNOWN, ASSUME THE WORST.

3

## BLOCK, DIVERT OR CONTAIN THE SPILL

Use spill barriers and/or booms to stop the flow of liquid before it can spread.

4

## PLUG THE LEAK

If possible, stop the source of the spilled material. To do this, it may be enough to close a valve or perhaps straighten a drum.

5

## IMPLEMENT A CLEANUP ACTION PLAN

Clean up the spill, circumscribed with spill barriers and absorb with pillows. Once this is done, dispose of all contaminated material properly.

6

## DECONTAMINATE

Decontaminate the site, personnel, and equipment.

7

## COMPILE THE FINAL REPORTS

Compile all notifications, medical exposure reports, and all documentation associated with the spill.

# COLOUR CODED FOR FAST, SAFE AND EFFECTIVE INTERVENTION

## GREY COLOUR (petroleum, water, refrigerants, solvents)

MRO (Maintenance, Repair and Operations) absorbent pads have been developed to intervene in the event of spills involving non-aggressive liquids such as:

- Petroleum
- Water
- Refrigerants
- Solvents

MRO pads are colour-coded GREY with a BLUE Spill kit label for easier identification.

## WHITE COLOUR (petroleum and fuels – NOT water)

Oil-Only absorbent pads absorb petroleum-based liquids from the surface of the water and can be used for spills on land during rainfall.

These absorbent products are colour-coded WHITE for quick identification and increased visibility.

## YELLOW COLOUR (acids, bases, oxidants or “unknown”)

HAZ MAT absorbent pads allow one to be ready to intervene in the event of an unexpected spill of aggressive liquids such as:

- Acids
- Bases
- Oxidisers
- Unidentified liquids

The products of this family are colour-coded YELLOW for quick identification and increased visibility.

# INDUSTRIAL ABSORBENT PADS

Industrial absorbent pads are suitable solutions for collecting spills of polluting liquids, oils or chemicals that could pose a danger to operators and the environment.

Cloths, pillows, absorbent spill barriers and emergency absorption kits can be applied in numerous sectors and are available in different sizes and with specific technical characteristics to meet the most diverse needs for the collection and containment of liquids.

Industrial absorbent pads make it possible to adequately respond to the Italian regulations on workplace safety (Legislative Decree 9 April 2008, no. 81) and on environmental protection (Legislative Decree 3 April 2006, no.152).

UNIVERSAL  
ABSORBENT PADS

ABSORBENT  
PADS FOR OILS

ABSORBENT  
PADS FOR  
CHEMICALS

## UNIVERSAL ABSORBENT PADS

Universal or maintenance absorbent pads are usually dark grey or black in colour and are made of non-woven fabric obtained as a result of the processing of polypropylene (meltblown). Resistant and highly absorbent, they are suitable for collecting spills of water-based or oil-based fluids and can also be used for non-aggressive and chemical liquids. They are ideal for use in industrial environments where, on a daily basis, different types of liquids are used both in production and during maintenance operations.

The DOUBLE THICKNESS absorbent pads allow rapid absorption and high fluid retention thanks to the increased thickness compared to traditional absorbent pads. In fact, the particular production system and the quality of the raw materials used guarantee maximum absorbency. The double-thickness absorbent pads are designed down to the smallest detail: the outer covering fabric reduces dripping when the pad is saturated, while the particular weave makes them resistant to traction, significantly reducing the risk of tearing.

SINGLE THICKNESS absorbent pads have a high level of absorbency and a long life, obtained thanks to the higher filling density and the increased thickness of the outer cover. They are suitable in case of concentrated spills as they are strong and particularly absorbent products. The high degree of resistance reduces consumption on the walkway side, making them the ideal solution for the creation of passage areas.

## INDUSTRIAL ABSORBENT PADS

- Embossed cloths for quick absorption, with a top layer coated with a non-woven film for greater mechanical strength
- Double thickness for greater absorption
- Single thickness for everyday use

### OIL ONLY ABSORBENT CLOTHS

AUTHORISED BY THE

DIRECTORATE GENERAL FOR THE PROTECTION OF NATURE AND THE SEA

DIVISION VI - PROTECTION OF THE MARINE AND COASTAL ENVIRONMENT according to the D. D. of 31 March 2009 and subsequent amendments and supplements

MINISTERO DELL'AMBIENTE E DELLA TUTELA DEL TERRITORIO E DEL MARE

Prot. 0014486 PNM of 15/07/2014 DIV. VI

OIL ONLY absorbent cloths are used in all cases of spillage of oil, hydrocarbons, paints, solvents on soil and in water. Made of 100% polypropylene fibre, they are easy to use and can be reused until saturated.

Polypropylene, or polypropene (PP), is a thermoplastic polymer with varying degrees of tacticity. Isotactic PP is a low-density, semi-crystalline polymer that enjoys a high tensile strength and good thermal and abrasion resistance.

OIL ONLY absorbent cloths are water-repellent, float and do not absorb water, making them ideal for collecting particular substances such as oils and hydrocarbons.

Used as a substitute for traditional cloths, absorbent cloths are the ideal solution in many areas: in the event of spills or leaks; for cleaning machinery, components and workbenches; as a support so as not to dirty the work surfaces. They are used directly on spills and surfaces to be treated and do not expire.

Technologically more advanced, they easily retain liquids and, with the same weight as traditional absorbent pads, they are more performing, allowing considerable savings in disposal. The latter must follow the provisions of Legislative Decree no. 152/2006 and subsequent amendments and supplements, which provides for their management and coding (CER code) as waste based on the type of substance they have absorbed.

OIL ONLY Comi cloths have been recognised by the Italian Ministry of the Environment and Energy Security as suitable for use at sea in the event of oil and hydrocarbon spills.

- Embossed cloths for quick absorption, with a top layer coated with a non-woven film for greater mechanical strength
- Double thickness for greater absorption in water or on the ground, they float even when saturated

## OIL ONLY ABSORBENT CLOTHS

ART.	dimensions mm		thickness	absorption capacity in litres	absorbency per cloth in L	pcs. per package	weight kg	colour
	W	D						
006373	500	400	double	95	0,95	100	6,5	white

**ABSORPTION:** OIL, HYDROCARBONS, PAINTS, NO WATER

- Embossed cloths for quick absorption, with a top layer coated with a non-woven film for greater mechanical strength
- Single thickness ideal on waterways for the collection of hydrocarbons

## OIL ONLY ABSORBENT CLOTHS

ART.	dimensions mm		thickness	absorption capacity in litres	absorbency per cloth in L	pcs. per package	weight kg	colour
	W	D						
006380	500	400	single	100	0,5	200	7	white

**ABSORPTION:** OIL, HYDROCARBONS, PAINTS, NO WATER

## INDUSTRIAL ABSORBENT PADS

- Embossed absorbent rolls with vertical and horizontal pre-cutting to facilitate cutting operations
- Upper layer covered by a film in non-woven fabric for greater mechanical strength
- Easy to position on the ground or on waterways
- They change colour during the absorption of hydrocarbons

### OIL ONLY ABSORBENT ROLLS

ART.	dimensions		thickness	absorption capacity in litres	pcs. per package	weight kg	colour
	H	W					
006397	500 mm	40 mt	double	95	1	6	white
006403	800 mm	40 mt	double	160	1	9	white
006410	800 mm	60 mt	single	160	1	9	white

**ABSORPTION:** OIL, HYDROCARBONS, PAINTS, NO WATER

- They adapt themselves perfectly for uses on primary rainwater tanks, lakes and rivers
- The resistant external sleeve prevents breakage during collection even if saturated

### OIL ONLY ABSORBENT SLEEVES

ABSORPTION OF 130 LITRES PER PACKAGE PC. 1

## ABSORBENT PADS FOR CHEMICAL PRODUCTS

The industrial absorbent pads for chemical products are suitable for the collection of chemical, aggressive, caustic and toxic liquids. They are identified by their yellow colour and have a high degree of absorbency (up to 16 times their weight), allowing great savings in waste collection. This type of absorbent pad quickly collects liquids with a capillary method, thanks to the oleophilic and hydrophilic properties.

- Embossed absorbent cloths for laboratories, with a top layer coated with a non-woven film for greater mechanical strength
- Double thickness for greater absorption

### ABSORBENT CLOTHS FOR CHEMICAL PRODUCTS

ART.	dimensions mm			absorption capacity in litres	absorbency per cloth in L	pcs. per package	weight kg	colour

## ABSORBENT PADS KIT

Emergency response kits are made up of a series of components that allow one to have a rapid and immediate response in the event of spillage of any type of liquid. The absorbent pads present are specific for the collection of water-based, petroleum, hybrid and natural liquids, such as oils, hydrocarbons, solvents, gasoline, diesel, greases, acids, bases, alkalis, detergents and gases dissolved in water.

It is recommended to place the emergency response kits in designated and easy-to-reach areas to intervene in a timely manner and avoid damage to the environment and operators.

DOWNLOAD THE HANDBOOK AND VIEW THE TECHNICAL DATA SHEETS

Portable kit in a lightweight transparent bag. The bag can be hung or attached to forklifts for timely intervention in case of drum breakage during transport

Plugs for wells and adhesive dams are used to block or divert the leakage of liquids to external wells. They are resistant to contact with oils, hydrocarbons and most chemicals and have an adhesive side that ensures adherence to the ground. They can be reused after each use and are washable with soap and water. Products should be stored away from direct sunlight and at room temperature.

### FLEXIBLE HIGH-DENSITY POLYURETHANE BARRIER

006083	90	90	20	70	1	10	yellow

**ABSORPTION:** ACIDS, BASES, OILS, PAINTS AND WATER  
CAN BE REUSED AFTER EVERY USE

The elastic PVC manhole cover carpet offers long-lasting protection against oils, chemicals, acids, bases and hydrocarbons, thus ensuring long-lasting reliability even in the most adverse conditions. This device is ideal for protecting the environment from potentially polluting or harmful spills. Equipped with lateral holes that allow water to pass through, keeping the manhole dry and functional. The central cone is designed to retain dust and solids, preventing obstruction of the drainage system and ensuring optimal waste management.

Inside the manhole cover carpet there are white water-repellent cloths and pillows, specifically designed to absorb hydrocarbons without retaining water. This allows the manhole to be kept free from oily contamination, making it an ecological and functional choice for any environment that requires the management of hydrocarbons. Installing the manhole cover carpet is simple and safe. After positioning the manhole cover carpet inside the concrete manhole, it is secured by the iron or concrete water trap.

# STORAGE DEVICES FOR FLAMMABLE PRODUCTS

Transportable collection containers for empty or half-empty spray cans. Proven safety approved by UN 1H2W/X150/S...

- Certified for UN 1950 (compressed gas waste packaging)
- Integrated opening to allow the WASTE DISPOSAL of spray cans even with the lid closed
- Lid with rubber seal and stable snap lock
- Additional safety thanks to being produced in antistatic plastic, therefore particularly suitable for indoor storage
- Large wheels and steel axle with straps for better transport even when full; maximum weight up to 150 kg - - - grey body, orange lid
- Supplied with fleece cloth (to absorb leaking liquids) and dangerous goods label "UN1950"
- For transport according to ADR, comply with the relevant packaging instructions

Protective material for storage and transport. Vermiculite, refractory, incombustible, non-toxic, waterproof, odourless, good humidity regulator, very stable over time. It is also a very resistant mineral that is not attacked by any kind of microorganism. A mineral such as vermiculite is used in a wide range of applications. For example, it is used as a thermal and acoustic insulator, as a thermal insulator for industrial plants, in the production of sound-absorbing plasters and fire-proof plasters, for packaging dangerous substances, in agriculture and floriculture.

# ANTI-FATIGUE MATS

---

Anti-fatigue mats are designed for operators who work standing up for long periods on a hard surface. Their composition absorbs shocks and significantly reduces pressure on the back, offering excellent anti-fatigue properties for the lower limbs (feet, knees, etc.). The use of a correctly installed anti-fatigue mat increases productivity and at the same time reduces absenteeism due to illness. The shock-absorbing effect of the anti-fatigue mat stimulates continuous micro-movements. Anti-fatigue mats are designed to make the body sway naturally and imperceptibly, thus improving blood flow. The ergonomic design distributes weight harmoniously, the non-slip surface prevents falls. The bevelled edges make it easier to get on and off, while the insulation increases comfort. The surface of the anti-fatigue mats cushions falling objects and protects the floor.

The ergonomic non-slip mat with diamond pattern is made of special materials that make it the most versatile solution for fatigue relief, both in static and in dynamic working positions. It has R10 slip resistance, according to DIN 51130, and a non-slip finish to prevent it sliding. It is available with bevelled edges on all four sides to reduce the risk of tripping, while the long sides have a yellow band to comply with OSHA directive 1910-144. It is recommended for very difficult working environments.

# HORIZONTAL SAFETY ADHESIVE SIGNAGE FOR INDUSTRIAL FLOORS

---

The safety adhesive signage allows creating specific signs to reduce risks, prevent accidents and protect people and property in warehouses, factories and workshops. It can convey messages regarding specific work areas, delimit an area (pedestrian areas, storage spaces, etc.) or can regulate traffic in warehouse aisles.

IT IS resistant to abrasion and to the continuous passage of forklifts and other means of transport and can be used for both internal and external signage in the plant. Adhesive signage must be periodically checked and examined to verify its visibility, the degree of deterioration and its relevance to the environment in which it is installed. Should the work area be dedicated to other operations or should there be changes in safety procedures, the signs must be updated accordingly.

# PROJECTED SIGNAGE

---

Safety at work is a top priority in every professional environment. Correct safety signage plays a fundamental role in preventing accidents and providing clear instructions to workers. In recent years, the introduction of projected safety signage has led to significant improvements in terms of effectiveness and visibility compared to traditional signage. Using advanced technologies such as LED projection, the projected signs are displayed directly on the surfaces of the work environments, making them immediately visible and easily understandable. This eliminates the need to search for and interpret signals on signs or stickers that are subject to deterioration over time, reducing the risk of misunderstandings and accidents.

It is the very powerful compact LED projector designed specifically for image projections in the most demanding conditions (for example in permanent outdoor installations or in industrial environments). Thanks to its functional and innovative design, it can also be used in all areas in which it is necessary to project images, logos, signals, photos with high quality. The absence of fans and the IP65 protection rating allow its use even in dusty environments or outdoors, for extended periods, with a LED life of 50,000 hours.

#### SIGNUM LED PROJECTOR

ART.	dimensions mm			weight kg	colour
	W	D	H		
ON REQUEST	411	122	181	6	black

Projects a thick, permanent floor line that eliminates any maintenance required by floor tape and paint lines.

- Designed for industrial environments
- Wide power range
- Wide temperature range
- Maintenance-free, no fans or motors
- Adjustable line length option
- Line thickness from 75 to 125 mm depending on projection distance

# MODULAR CONTAINER

---

Designed in an eco-sustainable and innovative approach, the modular container for outdoor storage offers a safe and versatile solution for the storage of materials in external environments. Made with high-quality materials, it is equipped with a containment basin at the base to ensure protection from spills and leaks from stored tanks. Resistant to weather conditions and strong winds, it is available in different configurations, customizable and modifiable over time due to the modular nature of the product.

# MODULAR SYSTEM

## MODULAR CONTAINER

Due to the possibility of obtaining different products from the same base, even through the possible modification of just a few components, it is possible to reduce production time and cut costs, offering a customized solution according to different requirements.

**A**

**Upper connection** available to house the rear walls and connect two canopies side by side while maintaining watertightness.

**B**

**The roof** has an inclination of 1.5° to prevent water stagnation and facilitate drainage in the event of adverse weather conditions.

**C**

**Fixing the side wall** by means of guttering, which facilitates assembly and at the same time prevents water from entering. Once the wall is in place, it can be fixed to the supporting structure.

**D**

**Wall fixing** by means of special profiles to minimize noise and movement even in windy conditions.

## TRANSPORT OPTIMIZATION

**OVERALL DIMENSIONS**  
**3000x2500x2770 h mm**

**1 TRUCK - 6 loads**  
**1 TRACTOR - 4 loads**

COLOURS **galvanised** **5010** **3000**

# DEPOTS FOR OUTDOOR USE

---

Outdoor storage facilities are practical containers with locks and ventilation slots equipped with spill pallets at the base. They allow the safekeeping and storage of hazardous and polluting substances for the environment in compliance with current regulations. The containers can have different outfitting configurations: galvanised carbon steel, insulation and/or with EI 120 and REI 120 panels. They are provided with CE marking and declaration of performance in full compliance with current legislation (Regulation 305/11, UNI EN 1090-1 and related standards). The design and calculation reports according to the anti-seismic regulations (D.M. 14/01/08) are provided if required by law or upon prior and explicit request.

## COMPLETE WITH:

- ✓ preparation for fixing to the ground with dowels (fixing borne by the user)
- ✓ continuous 80 mm sled feet for support
- ✓ flooring in heat-galvanised grille mesh 34x76 mm plate 25x2 mm - load capacity 600 kg/m<sup>2</sup>
- ✓ spill pallet in galvanised carbon steel th. 2.00 mm
- ✓ walls and roof in corrugated galvanised carbon steel
- ✓ door/s with two hinged doors in corrugated galvanised carbon steel
- ✓ gutter and downpipes
- ✓ lifting brackets for handling with forklifts

## OPTIONALS:

- hooks for lifting with crane
- external painting in RAL colour of choice (see list)
- walls in pre-painted sheet metal th. 0.65 mm (colours RAL 8019 / RAL 7016 / RAL 9002 / RAL 6005)
- increased load capacity of the flooring: on request

- ✓ preparation for fixing to the ground with dowels (fixing borne by the user)
- ✓ continuous 80 mm sled feet for support
- ✓ flooring in heat-galvanised grille mesh 34x76 mm plate 25x2 mm - load capacity 1000 kg/m<sup>2</sup>
- ✓ spill pallet in galvanised carbon steel thick. 2.00 mm
- ✓ "BI-BLOC" shelving
- ✓ walls and roof in corrugated galvanised carbon steel
- ✓ door with two/three sliding doors in corrugated galvanised carbon steel
- ✓ gutter and downpipes
- ✓ handling with forklift (forks opening) equipped with fork extension
- ✓ lifting brackets for handling with forklifts
- ✓ other arrangements on request

#### OPTIONALS:

- hooks for lifting with crane
- external painting in RAL colour of choice (see list)
- increased load capacity of the flooring: on request with surcharge to be quantified

### POSITIONING DIAGRAM

# GENERAL TERMS OF SALE

## 1. Definitions

1.1 In the context of these General Terms, the terms below shall have the following meaning:

- a) Seller: Comi S.r.l.
- b) Buyer: any company, body, legal entity that purchases the Products from the Seller;
- c) Products: the goods manufactured, assembled and/or marketed by the Seller;
- d) Order: each Product purchase proposal forwarded by the Buyer to the Seller;
- e) Order Confirmation: written acceptance of the Order by the Seller;
- f) Contract: the sale stipulated between the Seller and the Buyer following the Buyer's receipt of the Order Confirmation.
- g) Parties: the Seller and the Buyer jointly;
- h) Brands: all brands for which the Seller is the owner or licensee;
- i) Intellectual Property Rights: all intellectual and/or industrial property rights of Comi S.r.l., including therein, without any limitation, rights relating to patents for inventions, drawings or models, utility models, Brands, know-how, specific techniques, data, software, regardless of whether or not said rights are registered, as well as any application or registration relating to said rights and all other rights or forms of protection of a similar nature or having equivalent effect.

## 2. General Provisions

2.1 These General Terms of Sale (hereinafter, "Terms") form an integral part of the Contracts stipulated between the Seller and the Buyer for the supply of the Products.

2.2 The Terms apply between Comi S.r.l. (hereinafter, "Comi") and the Buyer without the need for an express reference to said parties or specific agreement to that effect. Any different terms and conditions shall only apply if confirmed in writing by the Seller.

2.3 The Seller reserves the right to amend, supplement or delete any provisions of these General Terms of Sale, at any time, giving notice to the Buyer, it being understood that said additions, amendments or deletions shall apply to all Sales stipulated from the 15<sup>th</sup> day after communicating the new Terms of Sale (by newsletter or any other correspondence sent in writing) to the Buyer.

2.4 Any reference whatsoever to trade terms (for example, EXW, DPA, DPU, DDP, etc.) shall be construed as a reference to the Incoterms® of the International Chamber of Commerce, in the text in force on the date the Contract is stipulated.

## 3. Scope of application

3.1 These General Terms of Sale (hereinafter, "Terms") apply to all Contracts (whether stipulated by phone, fax or email), unless expressly exempted in writing by the Parties and form an integral and substantive part of each Order, Order Confirmation, even if not expressly referred to.

3.2 The Buyer may neither invoke nor take exception to terms other than these Terms. Therefore, any terms specified in writing by the Buyer in the Order, or at any other stage of the contractual negotiation, or subsequent to the Order Confirmation, as well as any of the Buyer's own general terms of purchase, shall not be valid. Any written or verbal terms sent by the Seller's collaborators, employees, agents or representatives shall be null and void unless reproduced in the text of the Order Confirmation, or confirmed in writing by the Seller. To this end, the fulfilment, even partial, of the Order by Comi, or any other fulfilment towards the Buyer shall not and cannot be construed as tacit or implicit acceptance of any general provisions of the contract that Comi has not officially subscribed to.

3.3 The Terms are valid exclusively for contractual relations between Comi and professional operators, therefore Legislative Decree no. 206 of 6 September 2005 (Consumer Code) as amended and updated, shall not apply.

## 4. Offers and Orders

4.1 The Seller's offers are not deemed binding. The indications provided in the catalogues, tables and lists are not binding on the Seller, who reserves the right to make any changes to the Products and the relative prices; therefore, the Seller shall be bound only by what is stated in the Order Confirmation.

4.2 Each Order sent by the Buyer, whether directly to Comi or through the Seller's agents or representatives, shall be understood as an irrevocable purchase proposal effective for 30 (thirty) days, with effect from the date of its regular receipt by the Seller, unless exemption is expressly indicated on a case by case basis.

4.3 The sending of the Order by the Buyer implies the latter's full acknowledgement and knowledge of all these Terms, which shall be understood as fully accepted by the Buyer without limitation or reservation.

4.4. The Orders and/or any amendments to Orders placed verbally or by phone must be confirmed in writing by the Buyer. Otherwise, the Seller disclaims all liability for any errors or possible misunderstandings.

4.5 The Seller expressly reserves the right to evaluate each Order, not being bound to its acceptance.

4.6 Orders regularly accepted by the Seller by means of an Order Confirmation may not be cancelled by the Buyer without the Seller's written consent.

## 5. Stipulation of the Contract

5.1 The Contract is deemed as stipulated only after Comi has sent the Order Confirmation (via email, fax, or other digital means), with reference to each single Order. In any case, the issuance of the invoice by the Seller or the fulfilment of the Order by the Seller shall be deemed as confirmation.

5.2 In the event the Order Confirmation contains additions, limitations or other variations with respect to the Order, the Buyer's consent to said variations shall be understood as tacitly provided in the absence of any objection in writing, which must be sent to the Seller within 2 working days of receiving said Order Confirmation.

5.3 Amendments and integrations requested by the Buyer subsequent to the stipulation of the Contract shall have no force and effect unless accepted in writing by the Seller, possibly specifying new delivery terms, a new price and payment method.

5.4 All Contracts are understood as stipulated at the registered office of Comi S.r.l. in Italy, postcode 36027, in (Vi), Via Stazione Rossano no. 13.

## 6. Prices

6.1. The Product prices shall be those indicated in the Seller's price list in force at the time the Order is stipulated, or, if the Product is not included in the price list or the price list is not available, those indicated in the Order Confirmation.

6.2 The Product prices shall be those indicated in the Order Confirmation and, unless otherwise agreed, shall be understood as for goods delivered ex works (EXW). Said prices, unless otherwise indicated in the Order Confirmation, do not include costs and expenses for special packaging, shipment, insurance and transport from the Seller's premises, any expenses, taxes or duties pertaining to the sale of the Products, including all customs costs (by way of example but not limited to: duties, taxes and other charges for the export of the Products), which shall be borne by the Buyer.

6.3 The Seller reserves the right to make a price adjustment in the event of amendments (a) to the Contract, requested by the Buyer after the stipulation of said Contract and accepted by the Seller and (b) to the type of supply, material or execution of the Products due to incomplete or incorrect information and/or documentation provided by the Buyer.

## 7. Payment terms

7.1 Upon stipulation of the contract, the Seller may ask the Buyer to pay a deposit equal to 30% of the value of the supply. The Parties may, in any case, agree on the payment of a different deposit by written agreement in the Contract.

7.2 In the event of non-payment of the deposit, where provided for, the Contract shall be deemed as rescinded ipso jure and the Seller may request payment of the sums accrued up to that moment, in addition to compensation for all pecuniary and non-pecuniary damages, as well as expenses, including legal expenses, that may have been incurred.

7.3 If the payment terms are not set out in the Contract, payment shall be made 30 days after the end of the month in which the goods are delivered, by bank transfer. Payment shall be deemed to have been made when the sum becomes available to the Seller at their Bank in Italy. If the Parties have agreed on prepayment without any further indications, the prepayment shall be presumed to refer to the entire price of the Products included in the supply. In the event of split delivery, the Buyer may, for each delivery, pay the amount corresponding to the delivered goods unless otherwise agreed in writing in the Contract.

7.4 Payments must be made in the agreed currency and any bank charges or fees due in connection with the payment shall be borne in full by the Buyer.

7.5 In the event of non-payment or delayed payment by the Buyer, even in part, the Seller, without prejudice to any of its other rights, shall be entitled to suspend further deliveries even if due under other contracts, and to request the immediate and full payment of all the ordered material, as well as postpone its deliveries for a period equal to the delay in payment, regardless of the amount owing, until such time as said payment and the relative default interest has been paid.

7.6 In case of default and delayed payments, the Seller shall be entitled to the recognition and payment in its favour of the default interest pursuant to ex Law Decree 231/2002, in addition to any costs, including legal costs, that may be deemed necessary in order to recover any sums due to the Seller in any capacity whatsoever.

7.7 Non-payment of even a single invoice shall result in the Seller's right to terminate any Contract in force with the Buyer pursuant to art. 1456 of the Italian Civil Code and to suspend the processing or delivery of any other supply in progress, in any case without prejudice to full compensation for any damages resulting from the Buyer's non-payment or delayed payment. Any delays in processing the Orders or in deliveries caused by previous suspensions of production due to non-payment by the Buyer shall not constitute non-fulfilment by the Seller.

7.8 Any claims or disputes shall not give rise to the Buyer's right to suspend or delay payments.

## 8. Delivery terms

8.1 The delivery term shall be as set out in the Order Confirmation, and unless otherwise agreed, shall be understood as ex-works (EXW) at the Seller's facility. If requested and expressly agreed in writing in the Contract, Comi shall transport the Products at the risk, cost and expense of the Buyer. Any transport costs shall be borne by the Buyer, and this shall in no way affect the risks of shipment, which shall also be borne by the Buyer, at the latest when the Products are delivered to the first carrier.

8.2 The Products shall be delivered within the term indicated in the Contract, calculated in working days, it being specified however that the delivery terms are purely indicative and not essential, and in any case, do not include the transport times. The Seller, therefore, shall not be liable for any delay in delivery for any reason whatsoever.

8.3 If the Seller is requested by the Buyer to amend the delivery term, the latter shall make said request in writing and nonetheless settle the supply within the terms indicated in article 7 of these Terms. Only storage, delivery, assembly, disassembly and installation costs shall be excluded, which must nonetheless be settled by the new agreed delivery date.

8.4 Upon receipt of the goods ready notice, the Buyer shall collect the goods within a maximum period of 10 (ten) days. Failing this, the Products may be stored outdoors, with the Seller being released of all liability and with the forfeiture of all warranties to the benefit of the latter, with the costs of handling and storage being charged to the Purchaser, as well as any other expenses incurred by the Seller, who also reserves the right to have the goods stored at the expense of the Buyer.

8.5 Within 10 (ten) days of the goods ready notice, the Seller shall be entitled to issue a regular invoice.

8.6 In the event of a delay in collecting the goods, however prepared, for any reason beyond the Seller's control, the delivery shall nonetheless be deemed to have been fulfilled ten days after the transmission of the goods ready notice. In said case, the Seller shall have the right to proceed with invoicing and to demand fulfilment of the agreed payment terms, and may have the goods packed, transported or stored at the Buyer's expense, subject to any agreed compensation for any damage, including for storage, custody and warehousing of the goods.

## 9. Warranty

9.1 Comi guarantees that its Products are free from defects and comply with the technical specifications declared by the Seller. It remains understood that the Product sizes shall be understood as taking into account the tolerance margins of use in trade with reference to the type, quantity, quality of the Products. The Seller, therefore, does not guarantee the compliance of the Products

with particular technical specifications or characteristics, or their fitness for special uses other than those indicated in the technical specifications declared by Comi, except to the extent that said characteristics have been expressly agreed upon in the Contract or in the relative Order Confirmation.

9.2 The Product warranty is valid for 1 (one) year and takes effect from the date of delivery of the Products, it being specified that the "delivery date" shall mean the date on which the Products leave Comi's warehouses to be delivered to the Buyer, unless otherwise provided for in the Contract.

9.3 The warranty does not cover Products with defects due to: a) transport operations; b) non-compliance with the precautions of routine maintenance practices; negligent and careless use; c) non-compliance with the instructions provided by the Seller for use and/or storage of the Product; d) non-compliance with the installation and assembly rules of the outfitting and/or any other directions or instructions included in the technical notes accompanying the Product, if the installation and/or assembly of the outfitting has not been carried out directly by the Seller, but rather by the Buyer or a third party; e) tampering, maintenance in general, operations carried out by the Buyer or personnel not authorised by the Seller; f) abnormal and/or improper use of the Product; g) aggravation of damages caused by use of the Products by the Buyer once the defects have been manifested; h) use of non-original spare parts, components and accessories, or those not recommended by the Seller (the replacement or repair of non-original parts cannot be requested), and damage caused to the Product by their use; i) abnormal or faulty operation of the electrical power supply; l) corrosion, encrustation or breakages caused by stray currents, condensate, aggressive or acidic water, improperly performed descaling treatments, sludge or limescale deposits; m) unforeseeable circumstances, force majeure such as, by way of example and not limited to, frost, overheating, fire, theft, natural events (such as, for example, hail, tornadoes, lightning strikes, flooding, earthquakes), acts of vandalism, accidents and other similar events.

9.4 The Warranty does not apply if the sale price of the Products has not been paid in full, it being specified that if the payment is due in multiple instalments, the warranty shall take immediate effect and remain valid for as long as payments are made in a timely manner in accordance with the deadlines.

9.5 The Seller disclaims all liability for indirect damage caused by the defectiveness of a Product, such as, by way of example but not limited to, production downtime or failed shipment or transfer of the Product to third parties.

9.6 In any case, the Seller's liability shall not exceed the price paid by the Buyer for the individual sale contract based on the contents of which the specific claim for damages and/or compensation arose.

9.7 The Products shall be used solely and exclusively for the indicated purposes in compliance with safety regulations and in accordance with the provisions of the installation, use and maintenance manual provided by the Seller; should the Buyer use or sell the Products purchased and/or Products from the Seller for different scopes, the Buyer shall do so at their own risk, assuming all consequent liability. In said case, the Seller shall be released of any contractual and/or extra-contractual liability for any direct and indirect damages suffered, also by third parties, as well as in the case of poor maintenance, misuse, non-compliance with safety regulations and other hypotheses, and the Buyer shall indemnify the Seller against any costs and/or its own liability.

9.8 The warranty does not affect the rights set forth in Legislative Decree no. 206 of 06.09.2005 and subsequent updates and amendments (the "Consumer Code") where applicable, and which therefore remain unaffected.

10. Claims

10.1 During the warranty period, any claims relating to the condition of the packaging, quantity, number or exterior characteristics of the Product (defects and faults that are not hidden and which are visible from the outside), must be noted by the Client on the delivery note, signing the Transfer Document with the wording "specific reservation". Within and no later than 2 (two) working days from the date the Products are received, the Buyer must send the Seller a copy of the delivery note and relative photographic evidence, providing detailed information on the condition of the Product and nature of the relative defects, by email at the following address: [info@comistorage.com](mailto:info@comistorage.com).

10.2 Any claims relating to defects that cannot be identified by a diligent inspection upon receipt of the Products (hidden defects) must be notified to the Seller, under penalty of forfeiture, within and no later than 7 (seven) days from the date the defect is discovered, by certified email at the following address: [comi@pec.famispa.it](mailto:comi@pec.famispa.it), precisely specifying the product code, batch (if available), delivery date and nature of the defect.

10.3 Any Product for which no objection has been raised in accordance with the above-mentioned procedures and with the terms indicated above, shall be deemed approved and accepted by the Buyer.

10.4 Under no circumstances shall the Seller's agents, clients or intermediaries have the power to represent and bind the Seller vis-à-vis the Buyer or other third parties. To this end, any communication relating to Product defects and faults shall be deemed invalid and ineffective in the event it is made to the Seller's agents, clients or intermediaries, or in forms or manners other than those set out above.

10.5 If, following a claim in accordance with the above procedures and terms, the presence of Product defects is ascertained, the Buyer shall have the right to their repair free of charge within a reasonable time frame in relation to the extent of the defects, or, if the repair proves impossible or excessively onerous, the Buyer shall have the right to the free replacement of the Product at the Seller's sole discretion, excluding any further and other obligations for Comi. If necessary, the Buyer shall arrange for the defective Product to be sent, at its own expense, to the location indicated by the Seller, subject to any applicable provisions of the Consumer Code. The Seller shall send the new Product or repaired Product to the Buyer and bear the shipping costs.

11. Reservation of title

11.1 The Products shall remain the property of the Seller until such date as when the Buyer has paid for said Products in full and settled all sums due to the Seller.

11.2 If, in the country in which the Buyer has its registered office, in order for the reservation of title in favour of the Seller to be valid, administrative or legal formalities must be fulfilled, such as, without limitation, the registration of the Products in public registers or the affixing of seals on said Products, the Buyer hereby undertakes to collaborate with the Seller and to take all necessary steps in order for the latter to assert its reservation of title, also vis-à-vis third parties.

12. Force Majeure

12.1 Both the Buyer and Comi may suspend the fulfilment of their contractual obligations when said fulfilment is rendered impossible or unreasonably onerous by way of an unforeseeable impediment beyond their control, such as for example but not limited to, strikes, epidemics and/or pandemics, boycotts, lockouts, fires, war, riots and revolutions, requisitions, embargoes, power outages.

12.2 A Party wishing to avail itself of this clause shall immediately notify the other Party in writing by means of certified email, of the occurrence and termination of force majeure circumstances.

12.3 If the suspension due to force majeure continues for more than eight weeks, each Party shall have the right to terminate the Order subject to 10 days' notice, notified to the other Party in writing by means of registered post with return receipt, or by means of certified email.

12.4 In any case, it is understood that the Seller has the right to obtain payment for any Products already delivered, in addition to reimbursement for any costs already incurred.

13. Change in the Buyer's financial circumstances

13.1 Comi shall have the right to suspend the fulfilment of its contractual obligations arising from the supply of the Products in the event the Buyer's financial circumstances become such as to seriously jeopardise the fulfilment of the counter-performance, unless suitable security is provided. It is understood that the Seller has the right to obtain payment for any Products already delivered, in addition to reimbursement for any costs already incurred.

14. Intellectual property

14.1 Intellectual Property Rights are the sole and exclusive property of the Seller and their disclosure or use within the context of these Terms shall not give rise to any rights or claims on the part of the Buyer with respect thereto. The Buyer undertakes not to act in any way incompatible with the ownership of Intellectual Property Rights.

15. Jurisdiction and applicable law

15.1 Any disputes arising out of or in connection with these General Terms of Sale and/or the individual Contract, such as, by way of example but not limited to, disputes relating to their existence, validity, interpretation, efficacy and fulfilment, shall fall under the exclusive jurisdiction of the Court of Vicenza, even if the Contract has international elements.

15.2 Notwithstanding the above, the Seller is nonetheless entitled to bring the dispute before the competent court of the Buyer's headquarters.

15.3 These General Terms of Sale and/or each individual Contract shall be governed entirely by and construed in accordance with Italian law, even if the Contract has international elements, with the express exclusion of the Vienna Convention of 1980.

16. Privacy

16.1 The Buyer declares to have received all the information provided for by art. 13 of Regulation EU 2016/679 (GDPR) and consents to the processing of their personal data for the purposes set out in these general terms of sale, and to have been informed of the possibility to exercise their rights in relation to the data provided pursuant to Law Decree no. 196/2003 and Regulation EU no. 2016/679 (GDPR). The Seller declares that the data controller of the collected data is Comi S.r.l. with registered office in Rosà (VI), Via Stazione Rossano no. 13, VAT number and tax code 04377990249.

17. Final provisions

17.1 In the event either of the Parties refrains from taking legal action or exercising a right under these Terms, said acquiescence shall not be construed as a definite renunciation to take said legal action or exercise said right in the future.

17.2 The sale of Products by Comi to the Buyer does not give the latter any right to territorial exclusivity, nor does it allow the Buyer to assume the role of a Comi distributor or dealer.

17.3 The invalidity in whole or in part of the individual provisions of these Terms shall not affect the validity of the remaining provisions.

17.4 These Terms have been drawn up in the Italian and English language. In case of any doubt in their interpretation, the Italian version shall prevail.

# A FAMI COMPANY

Fami was founded as a company specialised in the manufacture of industrial outfittings. Over the years, significant resources and efforts have been invested in improving its professionalism, weaving a web of relationships, transforming studies on materials into increasingly functional and innovative products of the highest quality. Fami is a consolidated company split into divisions with 230 thousand square metres of production space (95 thousand of which are enclosed), and 400 employees. It has international offices in Germany, Poland, Switzerland and Austria, and works with authorised distributors worldwide. A total of eight million kilograms of iron and steel are consumed annually. Production is entirely in-house, with one division specialising in industrial furnishing and the other in commercial vehicle outfitting.

**INNOVATION**  
SINCE 1929.
